## **[Aim]**

Aim of the present study is to examine the effect of "Yojyo Henshiko (YHK) " in serum ALT and AST levels of the patients with liver diseases, such as HBV, HCV, Alcoholic liver, Drug abused liver, Fatty liver, Cirrhosis, Liver cancer and so on.

## **[Method]**

The prescription was given to the patients with different liver diseases under the control of physicians.

## **[Results]**

Serum levels of ALT and AST of the patients examined were markedly lowered after treatment with "YHK" for ten days.

## **[Conclusion]**

These results substantiate clearly the effect of "YHK" in lowering the enhanced serum levels of ALT and AST in the patients with hepatic diseases. Any side effects were not observed during the treatment.
